

LA RED BY VEOLIA

La Red
— reciclados plásticos —

by  **VEOLIA**

LA RED BY VEOLIA

La Red by Veolia was created in response to the new needs of the plastics recycling sector, solid waste management and other complementary services. Created in 1993, our facilities make up a comprehensive centre of more than 150,000 m².

Benchmarks in Spain for:

Implementation of new technologies

Production volume

Environmental friendliness

We are committed to continuing to evolve alongside our national and international customers, suppliers and society in general.

La Red by Veolia relies on the companies **C.T.C Servicios Ambientales S.L.** and **Banales** to generate synergies and business opportunities that make it possible to consider future openings of new facilities in strategic locations.

WE GUARANTEE THE QUALITY AND TRACEABILITY OF OUR PRODUCTS

We have an **Integrated Management System**, based on UNE EN ISO 9001:2015 Quality Management and UNE EN ISO 14001:2015 Environmental Management standards, and we are pioneers in obtaining the AENOR Certificate for Traceability of Recycled Plastic under UNE-EN 15343.

These certifications ensure the quality and traceability of the product together with environmental care, complying with Spanish and European regulations. We are also authorised managers of non-hazardous waste.

PURCHASE OF PLASTIC MATERIALS

At La Red by Veolia we specialise in the purchase of agricultural, commercial and household post-consumer plastics. We facilitate the entire procurement process, supported by our fleet of trucks and our national coverage.

An intelligent choice:

We are an authorised manager of HDPE, LDPE, PP and PET.

An environmentally friendly collection process.

We add value to plastic waste.

In our business group we are certified with IMS (Integrated Management System) from Ecoembes, guaranteeing the traceability of the materials recovered and subsequently recycled.

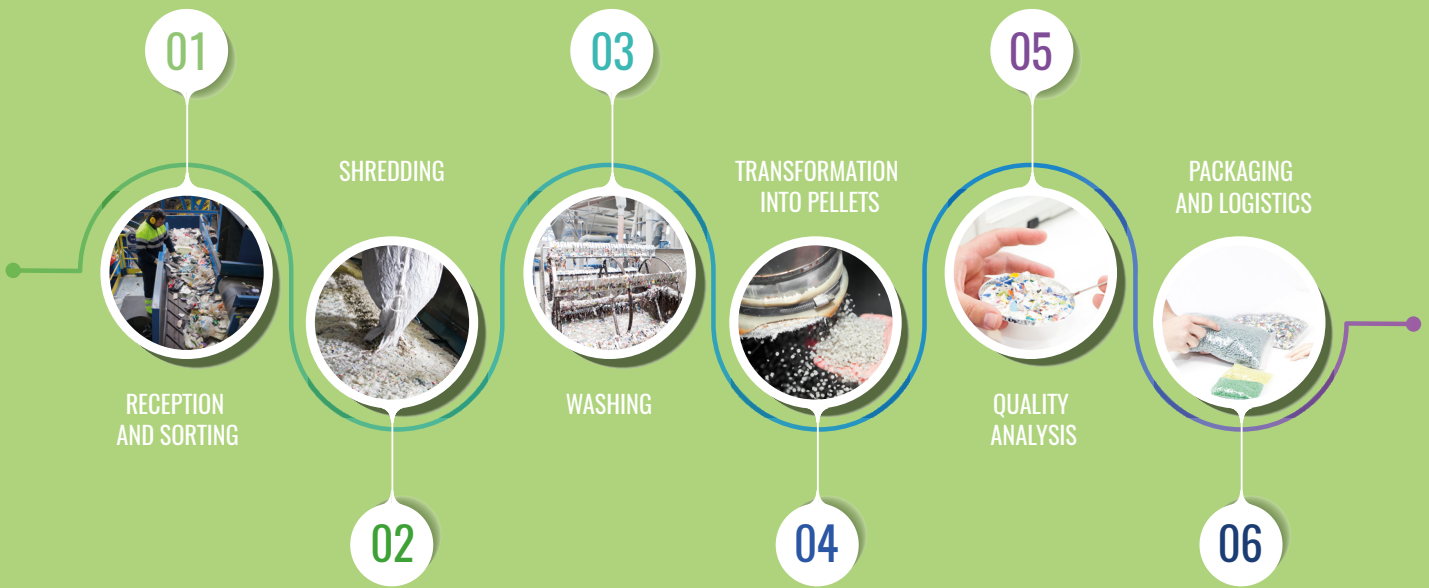

OUR COMMITMENT IS ZERO LANDFILL

INTEGRATED WASTE MANAGEMENT

Our group of companies is one of the benchmarks in integrated waste management, a process that it complements with other services to companies. This value chain integrates a specialised team, a high level of *know-how* and the use of cutting-edge technologies.

VALUE CHAIN OF THE RECUPERATION PROCESS

Our plants have a treatment capacity of 120,000 t/year.

OTHER SERVICES

MAQUILA: This service is aimed at those companies that transform plastic material, offering them the possibility of reusing generated production waste. Our company offers them a collection, recycling and delivery service, guaranteeing the quality of their own product.

We contribute to the circular economy by managing our customers' plastic waste to transform it into raw materials suitable for the manufacture of new plastic packaging.

QUALITY PELLETS AND PLASTIC MATERIALS

The result of our recycling and production processes are pellets and plastics that are distinguished by their quality, variety and process efficiency.

PRODUCTS ON DEMAND

Our group of companies has a continuous demand for the following products for the manufacture of our products:

- High density polyethylene (HDPE): blow moulding (BOTTLE), injection moulding (PLUGS, BOXES, PALOTS) or extrusion (PIPES, SHEETS).
- Low density polyethylene (LDPE): Film, reels, bags or extrusion (PIPES).
- MSW film: Mixed MSW film
- Polypropylene (PP): Injection moulding (TRAYS), blow moulding (BOTTLES), extrusion (RAFFIA) or thermoforming (CARTONS).
- Polyethylene terephthalate (PET): Industrial and post-consumer.

VEOLIA, leading company in decarbonisation, circular economy and optimised resource management

More than 15,000
employees in Spain

Nationwide presence

Veolia is the **world leader** in the optimised management of resources: water, energy and waste. With its **three complementary activities, it promotes the sustainable development of cities and industries.**

Plastiloop, the Veolia brand integrating
all plastic recycling solutions

Veolia has created Plastiloop, the world's first circular polymer platform to offer each customer an innovative and advanced solution to reduce its carbon footprint and save natural resources with polymer recycling and recovery. In addition, Plastiloop brings together all the Group's technical and commercial expertise in recycled plastics and becomes a long-term strategic partner to support its customers on the road to green transformation.

Veolia is a specialist in the integrated management of the water cycle, from its collection in the natural environment to its return to the environment, offering a wide range of services from the production and distribution of drinking water to the collection and treatment of wastewater.

A leader in energy efficiency in Spain, Veolia supports its customers in the optimal management of their facilities. We design flexible and innovative solutions to improve the well-being of users as well as to look after the planet.

Veolia offers a range of integrated services for the management of all types of waste: sorting of recyclable materials, energy recovery of biogas and plastic, and management of hazardous and hospital waste, among others.

ECOLOGICAL TRANSFORMATION IS OUR MISSION

In becoming the benchmark company for ecological transformation, Veolia is committing to accelerating and expanding the deployment of existing solutions, while at the same time creating tomorrow's solutions.
